

## ANNEX 6 – METHODS

Module in Sustainable Design Studio - *Indoor Environmental Quality*

Author: **MSc.Juljan Veleshnja**

### Teaching Method

In this module will be mixed together two methods: **Fieldwork** (This method involves the collection of information outside the traditional classroom setting) and **The Participating Observation** (This is a scientific investigation of the actions, behavior, or the effect of the action or behavior on an examination object). These two methods will try to make students and stakeholders apply directly all the theoretical aspects and verify the quality of the indoor environment, compared than with the standards. So real analyzes and data will made reflect all the participants about the behavior of the materials and technologies used, so from theory to practice.
